

WIFI FACILITIES AROUND BUSINESS & ECONOMICS SCHOOL : WHAT IS THE IMPACT TO THE STUDENTS?

Internet access is becoming a norm nowadays as it has become a way of communication and also a way of getting information and knowledge. It has become a new trend and internet is no longer a privilege only to certain groups of people. Everybody can use this facilities as it is very cheap and very efficient to disseminate information and so forth. The Business & Economics School sees the importance of internet access for the students especially for them to get the information and knowledge for their studies. Therefore, the School under the initiative by the Multimedia Committee headed by Mr.Yuzainy Janin, has taken a first step in 2004 to install wi-fi facilities around Business & Economics School's building. Since then, the demand from the students has become greater

and the existing wi-fi from that time cannot accommodate the demand by the students. As most of the students have their own laptops, therefore the school has installed more wi-fi around the school compound to meet the students' demand. By having the wi-fi facilities around the Business & Economics School building, nowadays many students are hanging around the lobby, student's lounge, corridors, etc. to have internet access for free either to do their assignment or just browsing the internet. This scenario has created a positive culture as Business & Economics School is busy with students - whereby a group of students are having an open discussion with their own laptop is commonly seen while others are busy at the other corner quietly browsing the internet. WiFi has really given impact to Business & Economics School students!

APOLOGY ON ISSUE 6 (JULY—DEC 2007)

Dr. Balvinder Kaur Kler had actually graduated from Surrey University, England not from Birmingham University, England as reported in the Issue 6 (July - Dec 2007). On behalf of the Editorial team, the mistake is very much regretted.
