KOTA KINABALU: The Neuro-Linguistic Programming (NLP) programme conducted at SK Likas, recently, will benefit pupils who will face the coming UPSR.

Organiser, Universiti Malaysia Sabah's (UMS) Deputy Humanity, Arts and Heritage Faculty Registrar Masri Judah said they took the initiative to hold the programme to assist pupils in the preparation through a series of knowledge sharing and self-motivation.

"The programme aimed to provide

confidence as well as to unearth the hidden talents of the participants.

"Apart from that, they were exposed to methods of becoming an excellent pupil and we also share mental and physical preparation guidance to face UPSR," he said.

SK Likas headmaster Mohd Jamie Mosliem said, such programme will create an impact for the pupils.

"Hopefully such programmes will be continued in future as knowledge sharing on techniques to become excellent

pupils is important and beneficial for the pupils' academic and character building," he said.

Muhammad Esyam Gamra, one of the participants, said the programme should be continued and extended to other schools.

"Through the programme, I was exposed to simple methods to learn the multiplication table as well as ways to achieve 6As in UPSR and this boosted my confidence to do my best in the coming examination," he said.
